## Question 4

The graph below shows the voltage, $V$, in an electric circuit as a function of time, $t$. The voltage is given by the formula $V=311 \sin (100 \pi t)$, where $V$ is in volts and $t$ is in seconds.

(a) (i) Write down the range of the function.

(ii) How many complete periods are there in one second?

(b) (i) The table below gives the voltage, correct to the nearest whole number, at equally spaced intervals from $t_{1}$ to $t_{12}$ over one complete period (as shown by the dashed lines on the diagram). Use the entries given in the table and the properties of the function to complete the table.

| $t$ | $t_{1}$ | $t_{2}$ | $t_{3}$ | $t_{4}$ | $t_{5}$ | $t_{6}=0.01$ | $t_{7}$ | $t_{8}$ | $t_{9}$ | $t_{10}$ | $t_{11}$ | $t_{12}=0.02$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| $V$ | 156 | 269 | 311 |  |  |  |  |  |  |  |  |  |

(ii) Using a calculator, or otherwise, calculate the standard deviation, $\sigma$, of the twelve values of $V$ in the table, correct to the nearest whole number.

(c) (i) The standard deviation, $\sigma$, of closely spaced values of any function of the form $V=a \sin (b t)$, over 1 full period, is given by $k \sigma=V_{\max }$, where $k$ is a constant that does not depend on $a$ or $b$, and $V_{\max }$ is the maximum value of the function. Use the function $V=311 \sin (100 \pi t)$ to find an approximate value for $k$ correct to three decimal places.

(ii) Using your answer in part (c) (i), or otherwise, find the value of $b$ required so that the function $V=a \sin (b t)$ has 60 complete periods in one second and the approximate value of $a$ so that it has a standard deviation of 110 volts.
