## Question 7

A flat machine part consists of two circular ends attached to a plate, as shown (diagram not to scale). The sides of the plate, $H K$ and $P Q$, are tangential to each circle.
The larger circle has centre $A$ and radius $4 r \mathrm{~cm}$.
The smaller circle has centre $B$ and radius $r \mathrm{~cm}$.
The length of [HK] is $8 r \mathrm{~cm}$ and $|A B|=20 \sqrt{73} \mathrm{~cm}$.

(a) Find $r$, the radius of the smaller circle. (Hint: Draw $B T \| K H, T \in A H$.)

(b) Find the area of the quadrilateral $A B K H$.

(c) (i) Find $|\angle H A P|$, in degrees, correct to one decimal place.
