Question 9

The depth of water, in metres, at a certain point in a harbour varies with the tide and can be modelled by a function of the form

$$f(t) = a + b\cos ct$$

where t is the time in hours from the first high tide on a particular Saturday and a, b, and c are constants. (Note: ct is expressed in radians.)

On that Saturday, the following were noted:

- The depth of the water in the harbour at high tide was 5.5 m
- The depth of the water in the harbour at low tide was 1.7 m
- High tide occurred at 02:00 and again at 14:34.
- (a) Use the information you are given to add, as accurately as you can, labelled and scaled axes to the diagram below to show the graph of f over a portion of that Saturday. The point P should represent the depth of the water in the harbour at high tide on that Saturday morning.

(b) (i) Find the value of *a* and the value of *b*.

L		 						 		 	 	 	 	 			 	 ——	
<u> </u>	 		<u> </u>	 	 	<u> </u>	<u> </u>	<u> </u>	<u> </u>	 	 		 <u> </u>		<u> </u>	<u> </u>		 <u> </u>	

(ii) Show that c = 0.5, correct to 1 decimal place.

(c) Use the equation $f(t) = a + b \cos ct$ to find the times on that Saturday afternoon when the depth of the water in the harbour was exactly 5.2 m. Give each answer correct to the nearest minute.
