## Question 1

When Conor rings Ciara's house, the probability that Ciara answers the phone is $\frac{1}{5}$.
(a) Conor rings Ciara's house once every day for 7 consecutive days. Find the probability that she will answer the phone on the $2^{\text {nd }}, 4^{\text {th }}$, and $6^{\text {th }}$ days but not on the other days.

(b) Find the probability that she will answer the phone for the $4^{\text {th }}$ time on the $7^{\text {th }}$ day.

(c) Conor rings her house once every day for $n$ days. Write, in terms of $n$, the probability that Ciara will answer the phone at least once.

(d) Find the minimum value of $n$ for which the probability that Ciara will answer the phone at least once is greater than 99\%.
