

**Question 1****(25 marks)**

- (a) In the expansion of  $(2x + 1)(x^2 + px + 4)$ , where  $p \in \mathbb{N}$ , the coefficient of  $x$  is twice the coefficient of  $x^2$ . Find the value of  $p$ .
- (b) Solve the equation  $\frac{3}{2x+1} + \frac{2}{5} = \frac{2}{3x-1}$  where  $x \neq -\frac{1}{2}, \frac{1}{3}$ , and  $x \in \mathbb{R}$ .

Q1	Model Solution – 25 Marks	Marking Notes
(a)	$(2x + 1)(x^2 + px + 4)$ $2x^3 + 2px^2 + 8x + x^2 + px + 4$ $8 + p = 2(2p + 1)$ $8 + p = 4p + 2$ $3p = 6$ $p = 2$ <p style="text-align: center;">Or</p> <p>Coefficient of <math>x</math> is <math>8 + p</math>  Coefficient of <math>x^2</math> is <math>2p + 1</math></p> $8 + p = 2(2p + 1)$ $8 + p = 4p + 2$ $3p = 6$ $p = 2$	<p><b>Scale 10D (0, 4, 5, 8, 10)</b></p> <p><i>Low Partial Credit:</i></p> <ul style="list-style-type: none"> <li>- Any relevant multiplication</li> </ul> <p><i>Mid Partial credit:</i></p> <ul style="list-style-type: none"> <li>- Multiplication completed without error(s)</li> <li>- Multiplication completed with errors and correctly identifies (in terms of <math>p</math>) the coefficient of <b>either</b> <math>x^2</math> or <math>x</math></li> <li>- Correctly identifies the coefficient of <b>either</b> <math>x</math> or <math>x^2</math></li> </ul> <p><i>High Partial credit:</i></p> <ul style="list-style-type: none"> <li>- Multiplication completed with error(s) but finishes correctly without further errors</li> <li>- Relevant coefficients equated (equation in <math>p</math>)</li> <li>- Multiplication completed and coefficients of <math>x^2</math> and <math>x</math> identified but solves incorrect equation in <math>p</math></li> </ul>

(b)

$$\frac{3}{2x+1} + \frac{2}{5} = \frac{2}{3x-1}$$

$$\text{CD: } 5(2x+1)(3x-1)$$

$$15(3x-1) + (4x+2)(3x-1) \\ = 10(2x+1)$$

$$12x^2 + 27x - 27 = 0$$

$$4x^2 + 9x - 9 = 0$$

$$(x+3)(4x-3)=0$$

$$x = -3 \text{ or } x = \frac{3}{4}$$

Or

$$\frac{3}{2x+1} + \frac{2}{5} = \frac{2}{3x-1}$$

$$\frac{15 + 2(2x+1)}{5(2x+1)} = \frac{2}{3x-1}$$

$$\frac{4x+17}{10x+5} = \frac{2}{3x-1}$$

$$(4x+17)(3x-1) = 2(10x+5)$$

$$12x^2 + 47x - 17 = 20x + 10$$

$$12x^2 + 27x - 27 = 0$$

$$4x^2 + 9x - 9 = 0$$

$$(x+3)(4x-3)=0$$

$$x = -3 \text{ or } x = \frac{3}{4}$$

**Scale 15D (0, 4, 7, 11,15)**

*Low Partial Credit:*

- CD or partial CD identified
- Cross multiply on LHS
- Multiplies one term correctly by one of the denominators
- $x = -3$  or  $x = \frac{3}{4}$  substituted and justified as a solution

*Mid Partial Credit:*

- Equation without fractions

*High Partial Credit:*

- Relevant quadratic in the form:  
 $ax^2 + bx + c = 0$

Note: No quadratic  $\Rightarrow$  low partial credit at most, except in the case where the candidate has reached the mid partial stage
