

**Question 6****(25 marks)**

- (a) (i) Given that  $x - \sqrt{32} = \sqrt{128} - 5x$ , find the value of  $x$ , where  $x \in \mathbb{R}$ .  
Give your answer in the form  $a\sqrt{2}$ , where  $a \in \mathbb{N}$ .
- (ii)  $A = \{\sqrt{32k^2}, \sqrt{50k^2}, \sqrt{128k^2}, \sqrt{98k^2}\}$ , where  $k \in \mathbb{N}$ .

Show that the **mean** of set A is equal to the **median** of set A.

- (b) Prove, using contradiction, that  $\sqrt{2}$  is **not** a rational number.
