## Instructions

There are two sections in this examination paper.

| Section A | Concepts and Skills | 150 marks | 6 questions |
| :--- | :--- | :--- | :--- |
| Section B | Contexts and Applications | 150 marks | 3 questions |

Answer all nine questions, as follows:
In Section A, answer all six questions
In Section B, answer:
Question 7
Question 8
either Question 9A or Question 9B.

Write your answers in the spaces provided in this booklet. There is space for extra work at the back of the booklet. Extra paper may be used if needed. Label any extra work clearly with the question number and part.

The booklet Formulae and Tables may be used.

Marks will be lost if all necessary work is not clearly shown.

Answers should include the appropriate units of measurement, where relevant.

Answers should be given in simplest form, where relevant.

Answer all six questions from this section.

## Question 1

(25 marks)
The line $l_{1}$ in the diagram has slope 3 and $y$-intercept 2 .
(a) Write down the equation of this line, in the form $y=m x+c$.

(b) On the diagram, draw and label the lines $l_{2}$ and $l_{3}$, where:
$l_{2}$ has slope 3 and $y$-intercept 7
$l_{3}$ has slope 1 and $y$-intercept 8 .
(c) On the diagram, draw and label the line $l_{4}$, which is perpendicular to $l_{1}$ and passes through the point $(0,4)$.

(d) Determine whether $l_{4}$ passes through the point $(27,-4)$.

## Question 5

(a) The following formula relates to the binomial distribution.

$$
P(X=r)=\binom{n}{r} p^{r} q^{n-r}
$$

(i) State what each of the letters $p, q, n$, and $r$ represents in the formula above.

(b) In a certain type of archery competition, Laura hits the target with an average of two out of every three shots. The shots are independent of each other. During one such competition, she has ten shots at the target.
(i) Find the probability that Laura hits the target exactly nine times.

Give your answer correct to three decimal places.

(i) Find the probability that Laura hits the target fewer than nine times.

(b) State the condition(s) under which the circumcentre of a triangle will lie inside the triangle, and justify your answer.

Answer Question 7, Question 8, and either Question 9A or Question 9B.

## Question 7

Probability and Statistics
(50 marks)

Some research was carried out into the participation of girls and boys in sport. The researchers selected a simple random sample of fifty male and fifty female teenagers enrolled in GAA clubs in the greater Cork area. They asked the teenagers the question: How many sports do you play?
The data collected were as follows:

| Boys | Girls |
| :---: | :---: |
| $0,4,5,1,4,1,3,3,3,1$, | $3,3,3,1,1,3,3,1,3,3$, |
| $1,2,2,2,5,3,3,4,1,2$, | $2,2,4,4,4,5,5,2,2,3$, |
| $2,2,2,3,3,3,4,5,1,1$, | $3,3,4,1,6,2,3,3,3,4$, |
| $1,1,1,2,2,2,2,2,3,3$, | $4,5,3,4,3,3,3,4,4,3$, |
| $3,3,3,3,3,3,3,3,3,3$ | $1,1,3,2,1,3,1,3,1,3$ |

(a) Display the data in a way that gives a picture of each distribution.

(b) State one difference and one similarity between the distributions of the two samples.

(c) Do you think that there is evidence that there are differences between the two populations? Explain your answer.

Note: you are not required to conduct a formal hypothesis test.

(d) The researchers are planning to repeat this research on a larger scale. List two improvements they could make to the design of the research in order to reduce the possibility of bias in the samples. Explain why each improvement you suggest will reduce the likelihood of bias.

The Wonder Building is an arched building that does not need any support inside, due partly to the fact that its shape is an arc of a circle.

The photograph shows a Wonder Building being used in Antarctica.

The arc for a Wonder Building can be a full semicircle or less than a semicircle. It cannot be more than a semi-circle. The "span" of the building is the total width from one side of the arch
 to the other.
(a) A particular Wonder Building has a span of 30 metres and a height of 10 metres. Find the radius of the arc.

(b) A customer wants a building with a span of 18 metres and a height of 10 metres.

(c) An air force needs a Wonder Building to house a Tornado military jet.

The dimensions of the aircraft are as follows:

- Wingspan: 14 metres
- Height: 6 metres
- Height of wingtips above ground: 2 metres.

The shelter must be at least 0.5 metres above the top of the tail, and at least 1 metre clear horizontally of the wingtips.

For the shelter to have the exact clearance required, find the radius of the arc.

A national newspaper reported in January 2010 that the average rent for a 3 bed-roomed house in Ireland was $€ 824$ per month. A Dublin estate agent conducted a survey of 40 such properties in the greater Dublin area to see if the same was true there. The estate agent's sample had a mean rent of $€ 1090$ and a standard deviation of $€ 480$.
(a) Using the estate agent's sample, construct a $95 \%$ confidence interval for the mean monthly rent of a 3-bed-roomed house in Dublin.

(c) The estate agent says that the survey shows that the average rent in Dublin is not the same as the average rent in the country as a whole.

Assuming the information reported by the newspaper is accurate, is there evidence to support the estate agent's statement? Conduct a hypothesis test at the $5 \%$ level of significance.
Clearly state the null hypothesis, the alternative hypothesis, and the conclusion.

(d) Describe two different ways that the estate agent might have collected the data in the sample. In each case, state clearly:

- what list is used to draw the sample from
- how the relevant information about each item is found, and
- what possible sources of bias there are.

(a) Let $\triangle A B C$ be a triangle. The line $l$ is parallel to $B C$ and cuts $|A B|$ in the ratio $s: t$, where $s$ and $t$ are natural numbers. Prove that $l$ also cuts $A C$ in the ratio $s: t$.

(b) The diagram represents a large symmetrical arrow $A B C D$ that is painted on the ground at one end of a runway.

The distance $B D$ is 5 metres and distance $C A$ is 2.5 metres, as shown. The angle $A D B$ measures $126^{\circ}$.

5 m
(i) Find the length of the perimeter of the arrow.

Give your answer correct to one decimal place.

(ii) Cat's eyes are reflective devices used in road markings. They are being laid along the perimeter of the arrow. One is placed at each vertex, and others are placed at intervals of no more than half a metre along the perimeter. How many are needed?
